INDICATIONS:
Kineret® is a prescription medicine called an interleukin-1 receptor antagonist (IL-1ra) used to:
• Reduce the signs and symptoms, and slow the damage of moderate to severe active rheumatoid arthritis (RA) in people age 18 years and older when 1 or more other drugs for RA have not worked
• Treat people with a form of Cryopyrin-Associated Periodic Syndromes (CAPS) called Neonatal-Onset Multisystem Inflammatory Disease (NOMID)

Please see accompanying full Prescribing Information.
“We advocated for our child. We did whatever we felt was necessary. And we never gave up.”

- Sam, father of Quinn who is a NOMID patient on Kineret

This represents one patient’s experience. Individual results may vary.

Please see accompanying full Prescribing Information.
What should I know about Kineret® (anakinra)?

**Kineret is injected daily under the skin**¹
- Kineret should be injected around the same time every day
- If you miss a Kineret injection and are unsure when to take your next one, contact your healthcare provider for guidance
- Even if you have used an injectable drug before, you may need some training and practice before you feel confident administering Kineret

**Kineret blocks a protein called interleukin 1 (IL-1)**¹
- Your doctor may have prescribed Kineret because he/she thinks your symptoms may be caused by IL-1
- Most RA treatments do not specifically block IL-1²

**The safety profile of Kineret has been demonstrated in a high-risk RA patient population**³
- If you have other health concerns or take certain medications, your doctor may think Kineret is a good choice for you
- High-risk RA patients include people with asthma, diabetes, chronic obstructive pulmonary disease, coronary artery disease, congestive heart failure, pneumonia

**IMPORTANT SAFETY INFORMATION**

**Who should not take Kineret?**
People who are allergic to:
- proteins made from bacteria called E.coli. Ask your healthcare provider if you are not sure
- anakinra or any of the ingredients in Kineret. See the end of the patient leaflet for a complete list of ingredients in Kineret.

**IMPORTANT SAFETY INFORMATION** (cont’d)

What information should I know before starting Kineret?
Before you use Kineret, tell your healthcare provider if you:
- have an infection, a history of infections that keep coming back, or other problems that can increase your risk of infections
- have kidney problems
- are scheduled to receive any vaccines. People using Kineret should not receive live vaccines

Please see accompanying full Prescribing Information.

**How does Kineret work?**

**Kineret reduces inflammation by blocking IL-1**¹
- The IL-1 protein plays an important role in NOMID and in some cases of RA¹⁴
- IL-1 binds to receptors on cells throughout the body to send a signal that can cause inflammation¹

**Signal causes inflammation and symptoms**

**IL-1**

**Kineret blocks the inflammatory signal**

**Inflammatory symptoms caused by IL-1 include:**¹⁵⁻⁸
- FEVER
- VOMITING
- RASH
- HEADACHE
- JOINT PAIN
- EYE REDNESS & PAIN
How to Use KINERET® (anakinra) Injections

I made a commitment to seeing it through... at this point, it’s part of my routine.

- Megan, an RA patient on Kineret

This represents one patient’s experience. Individual results may vary.

Please see accompanying full Prescribing Information.
**What information should I know before starting Kineret?**

Before you use Kineret, tell your healthcare provider if you:

- are pregnant or plan to become pregnant. It is not known if Kineret will harm your unborn baby
- are breastfeeding or plan to breastfeed. It is not known if Kineret passes into your breast milk. You and your healthcare provider should decide if you will use Kineret or breastfeed

**How is Kineret® (anakinra) supplied?**

Kineret is supplied in single-use, prefilled, graduated glass syringes

- Each graduated syringe contains 100 mg of Kineret solution
- Kineret is dispensed in a 7-day pack
- Use the Kineret prefilled syringe that matches the day of the week until all 7 syringes are used

**How is Kineret stored?**

Kineret is stored in a refrigerator between 36°F and 46°F (2°C and 8°C)

- DO NOT freeze or shake Kineret
- You can keep Kineret at room temperature for up to 12 hours
- If Kineret is left unrefrigerated for more than 12 hours, it should be discarded
- Keep Kineret in its original carton and away from light

**IMPORTANT SAFETY INFORMATION (cont’d)**

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Kineret and other medicines may affect each other and cause serious side effects. Especially tell your healthcare provider if you take certain other medicines that affect your immune system called Tumor Necrosis Factor (TNF) Blockers. Ask your healthcare provider for a list of these medicines if you are not sure.

Please see accompanying full Prescribing Information.
Preparing your injection

1. Set up a clean and flat work space such as a table

2. Take 1 Kineret® (anakinra) prefilled syringe out of the refrigerator

3. Check the expiration date

4. Wait for 30 minutes to let the solution come to room temperature

5. Ensure that the liquid in the syringe is clear and colorless (a few small bubbles are not a problem)

6. Gather your supplies
   - Alcohol swabs or wipes
   - Dry gauze, tissue, and/or cotton ball
   - Puncture-resistant sharps container

7. Wash your hands with soap and warm water

If you are administering Kineret to a baby or child, you may need to prepare a dose that is smaller than 100 mg. Please turn to the “For Kids” section to learn how.

IMPORTANT SAFETY INFORMATION (cont’d)
What are the possible side effects of Kineret?
Kineret may cause serious side effects, including:
- serious infections. Kineret may lower your ability to fight infections.

During treatment with Kineret, call your healthcare provider right away if you get an infection, have any sign of an infection including a fever or chills, or have any open sores on your body. You may get an infection if you receive live vaccines while you use Kineret. You should not receive live vaccines while you use Kineret.

Please see accompanying full Prescribing Information.
Select your injection site

1. Choose an injection site

2. Be sure to choose a new site each time you inject Kineret® (anakinra)
   - Do not inject an area that is tender, red, bruised, or hard
   - Avoid areas with scars or stretch marks
   - Do not inject close to a vein that you can see under the surface of the skin

3. Clean your injection site with an alcohol swab and let the area dry

**IMPORTANT SAFETY INFORMATION (cont’d)**

What are the possible side effects of Kineret?
Kineret may cause serious side effects, including:
- allergic reactions. Stop using Kineret and call your healthcare provider or get emergency help right away if you have any of these symptoms of an allergic reaction: swelling of your face, lips, mouth or tongue; trouble breathing; wheezing; severe itching; skin rash, redness, or swelling outside of the injections site area; dizziness or fainting; fast heartbeat or pounding in your chest (tachycardia); or sweating.

You can use the journal included in your Kineret Welcome Kit to track your injections. If you have questions about injection site rotation, or would like to request a new injection site tracker journal, call KINERET® On TRACK™ at 866.547.0644, 8AM to 8PM EST, Monday through Friday, to reach one of our Kineret trained nurses.

For questions about your treatment, read the Kineret Prescribing Information and/or ask your doctor.

**IMPORTANT SAFETY INFORMATION (cont’d)**

What are the possible side effects of Kineret?
Kineret may cause serious side effects, including:
- decreased ability of your body to fight infections (immunosuppression).
  It is not known if treatment with medicines that cause immunosuppression, like Kineret, affect your risk of getting cancer.

Please see accompanying full Prescribing Information.
**Giving your injection**

1. **Hold the syringe barrel and pull the cover straight off the needle**

2. **Gently pinch a fold of skin** at the cleaned injection site

3. **Hold the syringe like a pencil** at a 45- to 90-degree angle to the skin

4. **Insert the needle into the skin** with a quick, dart-like motion

5. **Slowly push the plunger** all the way down to inject Kineret® (anakinra)

6. **When the syringe is empty**, pull the needle out of the skin while keeping the needle at the same angle

---

**IMPORTANT SAFETY INFORMATION** (cont’d)

**What are the possible side effects of Kineret?**

Kineret may cause serious side effects, including:

- low white blood cell count (neutropenia). Kineret may cause you to have a lower number of certain white cells (neutrophils). Neutrophils are important in fighting infections. You should have blood tests before starting treatment with Kineret, then monthly for 3 months. After the first 3 months you should have your blood tested every 3 months for up to 1 year.

---

**IMPORTANT SAFETY INFORMATION** (cont’d)

The most common side effects of Kineret for RA include:

- Injection site skin reactions, including redness, swelling, bruising, itching, and stinging. Most injection site reactions are mild, happen early during treatment, and last about 14 to 28 days

Please see accompanying full Prescribing Information.

---

If you have questions or concerns about injecting Kineret, call KINERET® On TRACK™ at 866.547.0644, 8AM to 8PM EST, Monday through Friday, to reach one of our Kineret trained nurses.

For questions about your treatment, read the Kineret Prescribing Information and/or ask your doctor.
After your injection¹

1. Place a cotton ball or gauze over the injection site and press for several seconds
   - Don’t use an alcohol wipe—it may sting!
2. Put your used syringe in a sharps disposal container right away
3. Track your injection site in a diary or on the Kineret Injection Tracker

Understanding injection site reactions

- Skin reactions are the most common side effect with Kineret® (anakinra) and may appear as redness, swelling, bruising, itching, or stinging at the injection site¹
- Injection site skin reactions are most common during the first month of treatment and usually last about 14 to 28 days¹

Tips to help address injection site reactions:

- Cool the site with a cold compress or the enclosed ice pack for a few minutes, both before and after the injection
- Don’t skip the warm-up step of bringing Kineret to room temperature
- Apply hydrocortisone or an antihistamine cream to your injection site
- Rotate sites to avoid soreness. A diary or the Kineret Injection Tracker can help keep track of sites
- Don’t inject into skin that is red, bruised, tender, or hard

IMPORTANT SAFETY INFORMATION (cont’d)
The most common side effects of Kineret for RA include:
- rheumatoid arthritis (RA) gets worse with treatment
- sore throat or runny nose
- headache
- nausea
- diarrhea
- sinus infection
- joint pain
- feeling like you have the flu
- pain in your stomach area

IMPORTANT SAFETY INFORMATION (cont’d)
The most common side effects of Kineret for NOMID include:
- Injection site skin reactions, including redness, swelling, bruising, itching, and stinging. Most injection site reactions are mild, happen early during treatment, and last about 14 to 28 days. Injection site reactions have been observed less frequently in people with NOMID

Please see accompanying full Prescribing Information.
WHAT TO KNOW ABOUT USING KINERET® (anakinra) FOR YOUR CHILD

As your child grows, their understanding of the medication—the treatment—the importance of it comes.

— Colleen, mother of Quinn who is a NOMID patient on Kineret

This represents one patient’s experience. Individual results may vary.

Please see accompanying full Prescribing Information.
How do I prepare an injection of Kineret® (anakinra) for my baby or child?

The dose of Kineret may be smaller in babies or children:
- The recommended starting dose of Kineret is 1-2 mg/kg for patients with neonatal-onset multisystem inflammatory disease (NOMID)
- Kineret comes in 100 mg prefilled syringes

If you need to prepare a Kineret dose less than 100 mg, follow these steps:

1. Hold the syringe with the needle pointing straight up
2. Slowly push the plunger rod until you see a tiny liquid drop at the tip of the needle
3. Turn the syringe so the needle is pointing down
4. Hold the syringe above a sterile gauze or tissue
5. Slowly push the plunger until the top of the plunger has reached the correct dose

Once you have prepared the correct dose of Kineret, the injection can be given as described on page 13-14.

Important Safety Information (cont’d)

The most common side effects of Kineret for NOMID include:
- headache
- vomiting
- diarrhea
- joint pain
- fever
- feeling like you have the flu
- sore throat or runny nose

Injection tips for kids:
- Rotate injection sites to avoid soreness. A diary or the Kineret Injection Tracker journal can help keep track of sites
- Make injecting Kineret part of your daily routine
- Involve your child in the injection process
- Have your child help gather supplies
- Let your child choose each day’s injection site (ensuring that sites are rotated) or where in your home you will do the injection
- Purchase a selection of fun band-aids or ice packs and let your child choose which one to use that day
- As your child grows older and more independent, he/she can learn to administer injections under supervision or independently

If you have questions or concerns about injection site reactions, call KINERET® On TRACK™ at 866.547.0644, 8AM to 8PM EST, Monday through Friday, to reach one of our Kineret trained nurses.

For questions about your child’s treatment, read the Kineret Prescribing Information and/or ask your doctor.

Important Safety Information (cont’d)

Tell your healthcare provider if you have any side effect that bothers you or does not go away. These are not all of the possible side effects of Kineret. For more information, ask your healthcare provider or pharmacist.

Please see accompanying full Prescribing Information.
WHEN YOU HAVE QUESTIONS OR NEED SUPPORT

“KINERET® On TRACK™ allowed me to work with a case manager and get Kineret® (anakinra) sent right to my office.

– Megan, an RA patient on Kineret

This represents one patient’s experience. Individual results may vary.

Please see accompanying full Prescribing Information.
A team of experts supporting you every step of the way

KINERET® On TRACK™ case managers, nurses, and pharmacy specialists will:

☑ Guide you through the prescription, insurance, and delivery process
☑ Deliver Kineret® (anakinra) right to your home
☑ Provide injection training and support throughout your treatment

Additional training and communications—by email, on the phone, and in person—are available at every step of your journey. All you have to do is ask.

Call KINERET On TRACK at 866.547.0644, 8AM to 8PM EST, Monday through Friday

---

Case Managers
Case Managers can guide you through the insurance approval process and help find access solutions.

☑ Help understanding your insurance coverage for Kineret
☑ Co-Pay Program can reduce out-of-pocket costs to no more than $25 per shipment for eligible commercially insured patients*
☑ Patient Assistance Program can help eligible uninsured and underinsured patients access Kineret free of charge*

FAQ about paying for Kineret

How do I find out if my insurance covers Kineret?
Your Kineret Case Manager will be able to help you find out if your insurance covers Kineret and better understand your bills and co-pays.

Will I be eligible for the Co-Pay program?
The KINERET On TRACK Co-Pay Program offers up to $10,000 a year with a $25 monthly co-pay requirement. You may be eligible if you are a U.S. resident and have commercial insurance. You are not eligible if you have federal or state government insurance, such as Medicare, Medicaid, or TRICARE.

Will I be eligible for the Patient Assistance Program?
You may be eligible if you are a U.S. resident and are uninsured or if you are underinsured. A Kineret Case Manager will help you find out if you are eligible.

Call a Kineret Case Manager at 866.547.0644, 8AM to 8PM EST, Monday through Friday, to get the support you need.

*Patients must be US citizens or legal residents under the care of a licensed practicing healthcare provider and prescribed Kineret. Other terms and conditions apply.
**Kineret® (anakinra) Trained Nurses**
Our Kineret Trained Nurses are available, as needed, to help you learn about injection training.
- One-on-one injection training and in-home visits
- Tips and advice to help address common injection site reactions
- Guidance on injection site rotation and injection tracking

If you’d like to arrange an in-home visit for injection training, call us at KINERET® On TRACK™ at 866.547.0644, 8AM to 8PM EST, Monday through Friday.

**Kineret Pharmacy Specialists**
Pharmacy Specialists ensure you have access to a continuous supply of Kineret.
- Prescription delivery directly to your home
- Free sharps containers and needle clippers
- Refill reminders, emergency shipments, and more

RxCrossroads is a pharmacy that fills and ships your prescriptions

**FAQ about your Kineret supply**
**What happens if I am not at home to receive my Kineret shipment?**
You can choose to be at home to sign for your shipment of Kineret, or you can opt to waive the signature requirement. Every month you will receive a refill call, and at this time you can change the address where your shipment is to be delivered.

**What happens if I need an emergency supply of Kineret?**
If you need an emergency supply of Kineret, call your Kineret Pharmacy Specialist at 886.547.0644 and press option 4. Specialists are available to answer your calls during business hours (8AM to 8PM EST, Monday through Friday). At night or on the weekend, you can leave a voice message and we will get back to you within 2 hours.

To speak to a Kineret Pharmacy Specialist, call 866.547.0644, 8AM to 8PM EST, Monday through Friday.

**KINERET On TRACK Guidance**
You can sign up for KINERET On TRACK Guidance to receive extra support.
- Educational materials that help you know what to expect
- Tips and techniques through regular communications
- Online resources packed with useful information

**FAQ about KINERET On TRACK Guidance**
**What is the difference between KINERET On TRACK and KINERET On TRACK Guidance?**
When you place your Kineret order, you are eligible for all the KINERET On TRACK services. KINERET On TRACK Guidance is part of those services, enabling you to receive ongoing support—by email and on the phone—throughout your treatment when you agree to receive product and marketing information from Sobi.

**Will my information be used for anything other than prescription fulfillment?**
Your information will be stored in the KINERET On TRACK database, and will only be used for KINERET On TRACK and KINERET On TRACK Guidance communications.

If I unsubscribe from KINERET On TRACK Guidance emails, will I stop getting my medication?
You will still be able to get your medication if you unsubscribe from the KINERET On TRACK Guidance emails.

If you would like to sign up for KINERET On TRACK Guidance, fill out the mailer in this kit or call us at 866.547.0644, 8AM to 8PM EST, Monday through Friday.
INDICATIONS
Kineret® (anakinra) is a prescription medicine called an interleukin-1 receptor antagonist (IL-1ra) used to:
- Reduce the signs and symptoms, and slow the damage of moderate to severe active rheumatoid arthritis (RA) in people age 18 years and older when 1 or more other drugs for RA have not worked
- Treat people with a form of Cryopyrin-Associated Periodic Syndromes (CAPS) called Neonatal-Onset Multisystem Inflammatory Disease (NOMID)

IMPORTANT SAFETY INFORMATION
Who should not take Kineret?
People who are allergic to:
- proteins made from bacteria called E.coli. Ask your healthcare provider if you are not sure
- anakinra or any of the ingredients in Kineret. See the end of the patient leaflet for a complete list of ingredients in Kineret.

What information should I know before starting Kineret?
Before you use Kineret, tell your healthcare provider if you:
- have an infection, a history of infections that keep coming back, or other problems that can increase your risk of infections
- have kidney problems
- are scheduled to receive any vaccines. People using Kineret should not receive live vaccines
- are pregnant or plan to become pregnant. It is not known if Kineret will harm your unborn baby
- are breastfeeding or plan to breastfeed. It is not known if Kineret passes into your breast milk. You and your healthcare provider should decide if you will use Kineret or breastfeed

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements. Kineret and other medicines may affect each other and cause serious side effects. Especially tell your healthcare provider if you take certain other medicines that affect your immune system called Tumor Necrosis Factor (TNF) Blockers. Ask your healthcare provider for a list of these medicines if you are not sure.

What are the possible side effects of Kineret?
Kineret may cause serious side effects, including:
- serious infections. Kineret may lower your ability to fight infections. During treatment with Kineret, call your healthcare provider right away if you get an infection, have any sign of an infection including a fever or chills, or have any open sores on your body. You may get an infection if you receive live vaccines while you use Kineret. You should not receive live vaccines while you use Kineret.
- allergic reactions. Stop using Kineret and call your healthcare provider or get emergency help right away if you have any of these symptoms of an allergic reaction: swelling of your face, lips, mouth or tongue; trouble breathing; wheezing; severe itching; skin rash, redness, or swelling outside of the injections site area; dizziness or fainting; fast heartbeat or pounding in your chest (tachycardia); or sweating.

- decreased ability of your body to fight infections (immunosuppression). It is not known if treatment with medicines that cause immunosuppression, like Kineret, affect your risk of getting cancer.
- low white blood cell count (neutropenia). Kineret may cause you to have a lower number of certain white cells (neutrophils). Neutrophils are important in fighting infections. You should have blood tests before starting treatment with Kineret, then monthly for 3 months. After the first 3 months you should have your blood tested every 3 months for up to 1 year.

The most common side effects of Kineret for RA include:
- Injection site skin reactions, including redness, swelling, bruising, itching, and stinging. Most injection site reactions are mild, happen early during treatment, and last about 14 to 28 days
- rheumatoid arthritis (RA) gets worse with treatment
- sore throat or runny nose
- headache
- nausea
- diarrhea
- sinus infection
- joint pain
- feeling like you have the flu
- pain in your stomach area

The most common side effects of Kineret for NOMID include:
- Injection site skin reactions, including redness, swelling, bruising, itching, and stinging. Most injection site reactions are mild, happen early during treatment, and last about 14 to 28 days. Injection site reactions have been observed less frequently in people with NOMID
- headache
- vomiting
- diarrhea
- joint pain
- fever
- feeling like you have the flu
- sore throat or runny nose

Tell your healthcare provider if you have any side effect that bothers you or does not go away. These are not all of the possible side effects of Kineret. For more information, ask your healthcare provider or pharmacist.

Please see accompanying full Prescribing Information.

You are encouraged to report negative side effects of prescription drugs to the US Food and Drug Administration (FDA). Visit www.fda.gov/medwatch or call 1-800-FDA-1088.
